

Nome: _____

Data: _____

Os primeiros vestígios de vida no planeta Terra apareceram no mar – Era Paleozóica.

As trilobites eram animais marinhos de diferentes tamanhos. Apresentam o corpo dividido em: céfalo, tórax e pigídio.

Longitudinalmente diferencia-se em 3 lobos – daí o nome de trilobite.

1. Completa os espaços brancos com as palavras corretas.

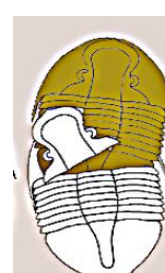

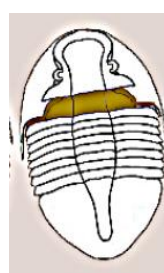

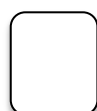

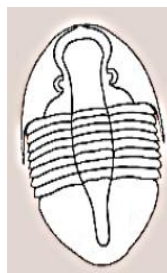

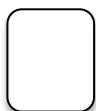

a) Um dos primeiros vestígios de vida que surgiu no planeta Terra foi _____ (Trilobite / Dinossauro).

b) As trilobites viviam n_____ (Mar/ Terra).

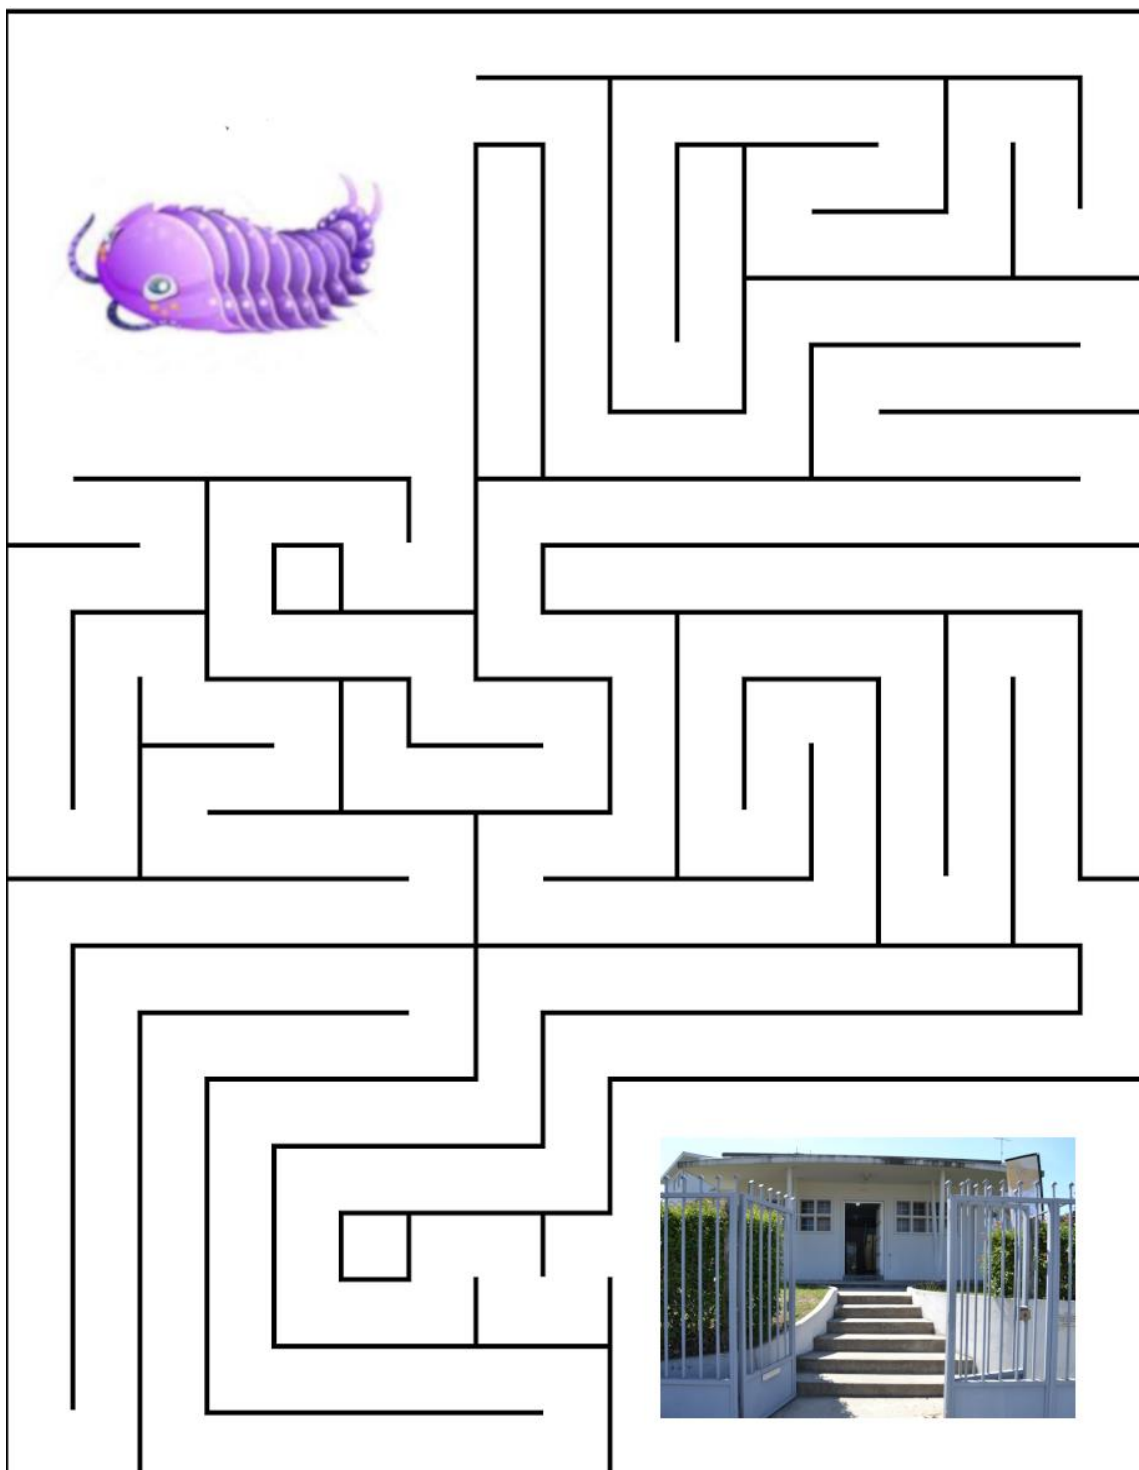

c) O seu corpo era dividido em _____ lobos (4 / 3).

d) As trilobites são parecidas com _____ e _____ (lagosta e caranguejo) / (caracol e girafa).

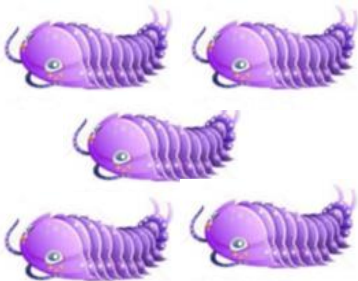

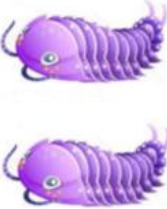

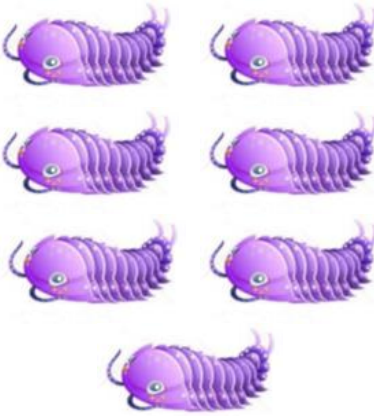

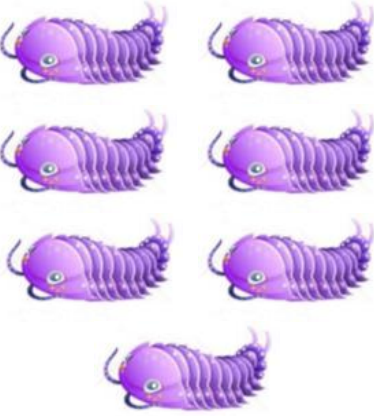

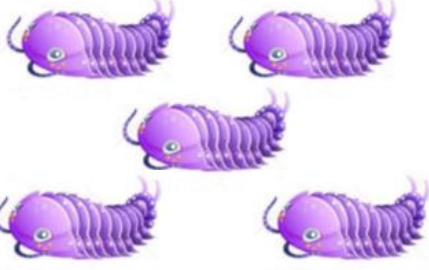

2. Ordena as fases da mudança da Carapaça de Trilobite.

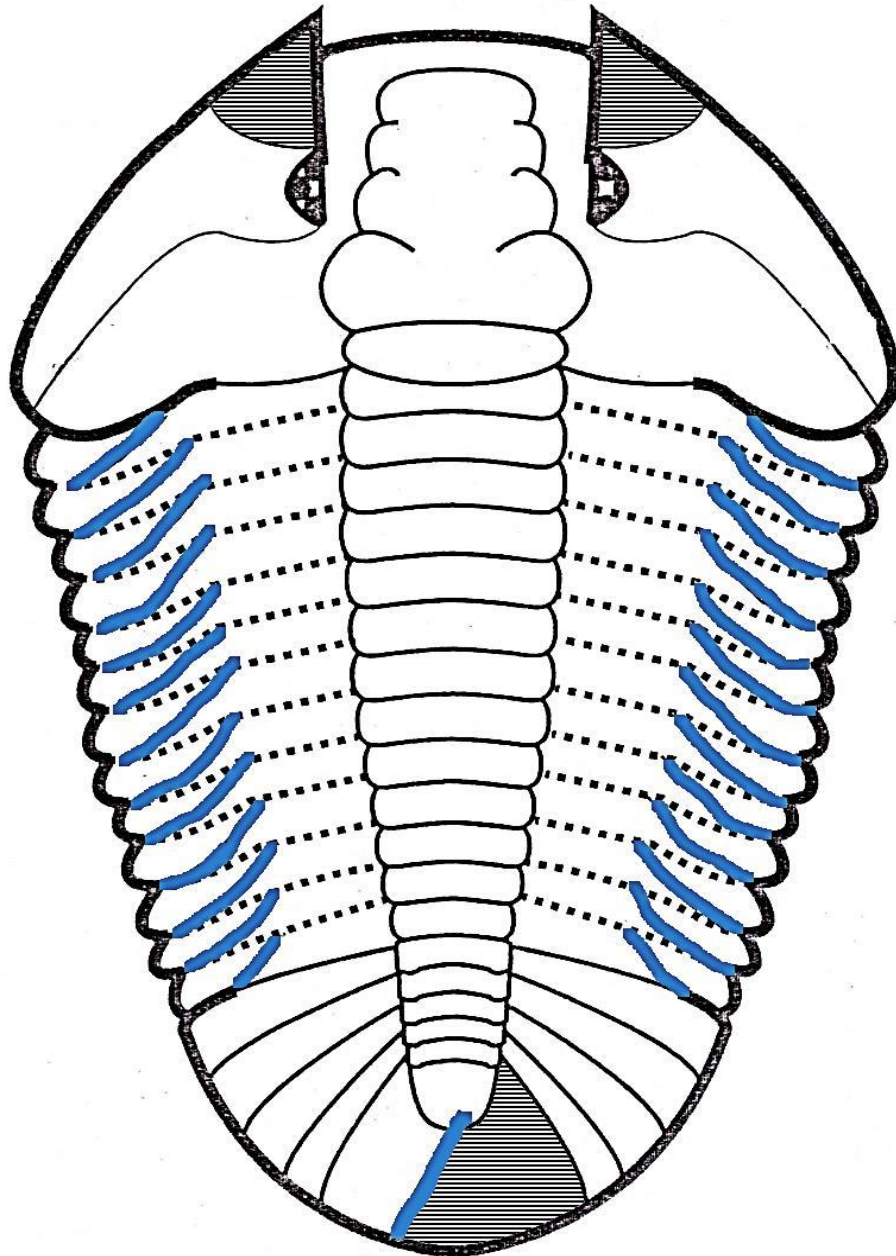

3. Ajuda a trilobite a chegar ao Museu Mineiro.

4. Resolve :

	×		=	
	×		=	
	+		=	
	-		=	

5. Corta as linhas pretas mais escuras e as azuis e cola as zonas sombreadas para formar uma trilobite.

BOM TRABALHO! 🐙
